

How To Apply Your Decals/Stickers Using Transfer Tape/Paper

Your stickers are made up of three layers:

1. The backing paper that the vinyl is stuck to.
2. The transfer tape which is the layer on top of the sticker.
3. The vinyl sticker itself which is sandwiched in between the backing paper and transfer paper.

Applying your sticker:

Remove the backing paper that the vinyl is stuck to.

Now, position the sticky side of the sticker and transfer tape onto your chosen surface and using your fingers, credit card or flat spatula, rub thoroughly across the entire surface of the decal.

Slowly peel the transfer paper back on itself. Do not peel at a 45 degree angle. The transfer paper should be peeled back flat on itself as shown below.

If any part of your sticker lifts during the transfer tape peel back, simply smooth the transfer tape and sticker back down, rub over it firmly again and then re-peel.

Voila! Job done 😊
